

Drivers of St. Lawrence River and Great Lakes Water Level Variability

A talk by **Dr. Andrew Gronewold, P.E.**, Associate Professor,
University of Michigan, School for Environment and Sustainability

Save The River®

Upper St. Lawrence RIVERKEEPER®

Friday, August 14 • Followed by a Meet and Greet Speaker's Reception • Clayton Opera House

Dr. Andrew Gronewold, P.E., is an Associate Professor with the School for Environment and Sustainability (SEAS) at the University of Michigan. He also holds adjunct faculty appointments in the University of Michigan's Department of Civil and Environmental Engineering, and in the Department of Earth and Environmental Science.

Dr. Andrew Gronewold

Dr. Gronewold conducts research through a range of hydrological science projects that explore methods for quantifying and communicating uncertainties arising within long-term hydrological monitoring networks and data, and incorporating those uncertainties into models and risk-based water resources management decisions. **His recent research has focused on monitoring, analyzing, and forecasting the long-term water budget and water levels of the Great Lakes.**
